Road Map

Problem

- Over **10 million Vietnamese** suffer from sleep issues.
- **15 - 20%** of adults and **30 - 40%** of the elderly experience sleep disorders.
- Consequences: lower life quality, reduced productivity, higher healthcare costs, and accident risks.
- Despite various sleep aids (trackers, apps, pillows), current solutions are limited:
Focus only on data or one aspect of sleep (e.g., posture or deep sleep).
Lack personalization and emotional support.

Ezzie (Easy to sleep)

- Ezzie is a smart pillow that connects to a mobile app for real-time, two-way integration.
- Users set sleep goals, and the pillow adjusts temperature, light, and sound accordingly.
- It tracks sleep data and, over time, the app delivers smarter, more personalized recommendations.

Hardware

Protection System:

Electronics are housed in carved foam slots and waterproof silicone casings for insulation and durability. A breathable, TPU/PU-coated inner lining blocks moisture without affecting sensor accuracy.

Environmental Control:

The pillow tracks sleep stages and adjusts light, sound, and temperature in real time. Each pillow adapts uniquely to user goals.

Life Cycle: 6 years

Bio-signal Sensors:

Brainwaves: Detects electrical brain activity
Heart rate: Measures pulse via light absorption
Respiration rate: Tracks breathing through reflections
Motion sensors: Detect micro-movements.
Temperature: Measures body & ambient via contact.

Pillowcase:

65% brushed cotton,
35% polyester

Cushion Structure:

Three-layer memory foam:
Top: Soft, ventilated foam for breathability. Adjustable to customize pillow height.
Middle: Medium-density for sensor integration
Bottom: Firm base to hold electronics

Battery:

- Lithium-polymer: slim, safe, flexible
- Lasts up to 10 days, 2h full charge
- Lifespan: 300–500 cycles (~2–3 years)
- Battery % shown on pillow & app

- Personalized AI Engagement
- Ongoing Feedback Loop
- Community Support & Belonging
- Consistent, Non-Intrusive Communication

Channel

Direct channels

- Direct sales via Ezzie website

Indirect channels

- E-commerce platforms
- Electronics and tech retail chains
- Retail chains specializing in sleep and mattress products
- Websites of specialized retail partners

Customer Segment

Primary Target:

- Age: **30 - 50**
- Income: **20,000,000 VND**
- Middle-aged adults who are health-conscious, experience sleep-related issues, and prefer convenient, user-friendly, and multifunctional tech products.
- Seeking sleep solutions either for themselves or for their parents.

Secondary target:

- Age: **23-29**
- Income: **15,000,000 VND**
- Health-conscious individuals who seek a balance between health and life, prefer tech products, and are budget-aware.

Cost Structure

Fixed cost

- Salary for staff full time
- Software + App Development
- Initial website setup fee
- App Infrastructure & Maintenance
- Licensing and Patents

- Hardware Development
- Branding & Marketing
- Depreciation
- App Store Fee
- Office Rent

Variable Costs

- Electronic components & sensors cost per unit
- Memory foam cost per unit
- Pillowcase cost per unit
- Waterproof silicone casing
- Processing & testing at East West
- Logistics per unit
- Customer support and Service (per unit)
- Salary for part time staff (Marketing, Check order,...)
- Brand inserts, QR code, leaflet (in box)
- Expert Advisor
- Branding & Marketing
- Utility Cost

Revenue Stream

- Selling the smart pillow
- App-based revenue stream
- In-app advertising

MANUFACTURING PROCESS

SEGMENTATION

Segment	Age	Characteristics
Students	18–22	Low income, tech-savvy, trend-driven, stressed from study/work, sleep issues
Young Professionals	23–29	Tech-savvy, budget-conscious, health-aware, work-life balance seekers, frequent stress from jobs
Working Adults	30–50	Stable/relatively high income, health-focused, frequent stress, value-oriented
Retirees	50+	Low tech use, rely on family, value comfort and simplicity, prioritize health

TARGETING

TARGETING	PRIMARY TARGET	SECONDARY TARGET
Age	30-50	23-29
Income	More than 20 million VND/month	More than 15 million VND/month
Occupation	Entrepreneurs, office employees,....	Office employees, content creators,...
Psychographic	Health-conscious, work-life balance seekers, stressed workers, sleep-deprived	Health-aware, work-life balance seekers, frequent stress from jobs
Geography	Urban areas	Urban areas
Purchase behaviour	Value-driven, health-conscious, intentional buyers, prefer trusted platforms with detailed info	This group is budget-conscious due to early career or startup stages, yet tech-savvy and more health-aware than others.
Pain point	Stressed and sleep-deprived, beginning to face age-related sleep issues, values quality but overwhelmed by choices.	High pressure and poor sleep habits, limited work-life balance, health-aware but budget-conscious with growing income.
Benefits sought	Personalized sleep improvement, energy recovery, long-term health maintenance, work-life balance, reliable support	Better sleep and less stress, sleep and health tracking, app integration for digital habits, improved focused mood and energy, control over personal health

Pain points

- Busy lifestyle with limited sleep time
- Sensitive to noise, heat, and unfamiliar environments
- Skeptical of gimmicky, ineffective products
- Concerned about reliability and durability

Goals

- Sleep better to stay productive
- Wake up refreshed and energized
- Avoid meds and short-term fixes
- Build long-term healthy sleep habits
- Gain comfort and peace during stress

Behavior

- Checks reviews on e-commerce and YouTube before buying
- Prefers transparent, proven brands
- Buys online and offline, values support and warranty
- Consults partner for big purchases
- Seeks low-effort, emotionally supportive solutions

Hobbies

- Following health, wellness, and tech influencers
- Exploring new wellness trends and products
- Browsing Facebook and YouTube
- Unwinding with music or podcasts at night
- Spending quality time with family
- Caring for his family.

Ezzie Helps

- Auto adjust light/sound/temperature for sleep
- Data-backed, no input needed
- Reliable, long-term use
- Provide quiet emotional support

Background

- 33 years old
- Project Manager in a tech company
- Married, one child
- Income: 30,000,000 VND/month
- Hanoi

Pain points

- Overthink at night, hard to fall asleep
- Wake up tired, lacks energy
- Tried sleep aids but felt impersonal
- Want to feel cared for after long days

Goals

- Deep, quality sleep in limited time
- Emotional comfort before bed
- A warm, human-centered solution

Behavior

- Watch TikTok reviews before buying
- Shop online, prefers home delivery
- Gift useful tech to loved ones
- Loyal to caring, high-value brands
- Interested in promotions

Hobbies

- Active on Facebook, Instagram, TikTok
- Interested in health, sleep, skincare and wellness trends
- Likes relaxing digital content at night – bedtime tips, soft reminders
- Attracted to products with smart design and soothing UX/UI

Ezzie Helps

- Act as a gentle, caring bedtime companion
- Use light/sound/temp to support sleep
- Send soothing reminders and wake-up notes
- Provide emotional comfort without pressure

Background

- 23 years old
- Tour guide
- Lives alone in Hanoi
- Income: 18,000,000 VND/month

POSITIONING

4Ps

1

PRODUCT

Smart pillow + companion mobile app that enhances sleep quality with real-time tracking, sleep environment adjustments, and expert-backed health benefits.

2

PRICE

1,990,000 VND - a competitive price for a high-tech wellness product, designed for value-driven and tech-savvy consumers.

3

PLACE

- Online DTC: Ezzie website.
- E-commerce: Shopee, Lazada, TikTok Shop, Tiki.
- Retail Partners: Vua Nệm, Nệm Xanh, Điện Máy Xanh, FPT Shop, Hoàng Hà Mobile, CellphoneS.

PHASE 2: ENGAGE

KEY HOOK

Pop-up booths: Sleep your way with Ezzie

Vincom Mega Mall Times City & Royal City (HN)
Saigon Centre & Vincom Đồng Khởi (HCMC)

 Hands-on experience:

- Smart pillow + Mobile app
- Personalized sleep settings
guided by trained staff

 Photobooth + Lucky draw

 Gifts: sleep masks, tote bags, keychains

 QR feedback

 3 days per booth

SUPPORT TACTICS

 Podcast: Vietcetera.

 Bundle sales: collaborate with retail chains (e.g. Điện Máy Xanh, Vua Nệm...)

 Interactive landing page + Instagram ads.

 Sponsored Facebook posts on KOL-owned channels: Giang Oï, Kiên Review.

 KOL/KOC content features Ezzie forum links to grow a sleep-focused community.

PHASE 3: AMPLIFY

KEY HOOK

SOCIAL CAMPAIGN: Make Sleep Ezzier

Run at:

Bạch Mai Hospital & Lotte Hotel (Hanoi).

Chợ Rẫy Hospital & The Reverie Saigon (HCMC).

🛏 Users try Ezzie directly in hospital/hotel rooms.

🤖 Real-time sleep personalization (data-based).

📷 Tourists Share photos with #MakeSleepEzzier.

👩⚕️ For patients: Doctors/nurses ask about their experience and give feedback => feature these stories on website and fanpage.

📱 QR feedback for remarketing (only for tourists).

SUPPORT TACTICS

📺 Pitch results of the campaign to national TV (e.g., VTV1 – Chuyển động 24h, 5 phút hôm nay)

📸 Campaign participants are encouraged to share real experiences

🤝 Referral program : Both referrer and friend receive a limited-edition pillowcase

ROAD MAP

2025-2026

- Launch product and enter Vietnamese market
- Distribute via:
 1. Owned website
 2. Retail partners
 3. E-commerce platforms
- Intensify marketing to acquire first users (online & offline)
- Collect and analyze user feedback to enhance user experience

2029-2030

- Start generating profit
- Sell by-products: Custom-made brand items, sleep socks, subscription-based sleep coaching
- Open company-owned stores in Hanoi and Ho Chi Minh City
- Develop strategies to reduce reliance on: Suppliers, hardware OEM, logistics partners
- Launch community-focused marketing to create positive social impact

2027-2028

- Expand sales channels nationwide:
 1. Collaborate with more retailers
 2. Enter shopping malls
- Continue R&D to improve smart pillow and mobile app
- Focus marketing on one impactful touchpoint
- Adopt strategy: “Simple but Powerful Enough”
- Strengthen brand identity and positioning

QUESTION AND ANSWER

Question

Answer

APPENDIX

EZZIE

BUSINESS IDEA

ezzie

PROBLEM STATEMENT

Problem Overview

- Over 10 million Vietnamese experience sleep problems; 15–20% of adults and 30–40% of the elderly suffer from sleep disorders (Ministry of Health).
- Consequences include reduced quality of life, lower productivity, higher healthcare costs, and increased risk of traffic and workplace accidents.
- The WHO has identified sleep deprivation as a “public health epidemic.”

Limitations of Current Solutions

- Most current devices lack deep personalization, only tracking data or supporting a small part of the sleep process.
- They fail to address emotional needs such as reassurance and companionship, especially for those with insomnia or stress.
- Existing products solve only one issue per device, ignoring the fact that sleep is a holistic, individual experience.

Our Solution – Ezzie

Ezzie Smart Pillow provides a comprehensive, adaptive solution that responds to each user's habits, emotions, and personal sleep needs.

BUSINESS IDEA

“EZZIE”

- Inspired by “easy”, reflecting the goal of effortless, restful sleep.
- “zz” replaces “s” as a playful nod to the sound of sleep (“zzz”).
- Short, simple, and friendly – easy to pronounce for all users, including the elderly and non-native speakers.
- Conveys warmth and trust, positioning Ezzie as a comforting, empathetic companion, not just a device.

BUSINESS IDEA

Hardware - Smart Pillow (Ezzie)

1 Materials

Outer Layer Material: Premium Fabric Blend

→ 65% Brushed Cotton

↳ Soft, smooth surface → enhances comfort and premium feel

→ 35% Polyester

↳ Increases fabric strength

↳ Reduces wrinkles

↳ Improves durability

→ Result: Balanced combination of softness, breathability, and long-lasting performance → delivers a high-quality user experience

- Top layer: Soft, breathable, removable → height adjustable
- Middle layer: Medium-density foam → integrates bio-signal sensors
- Bottom layer: Firm foam → protects and houses electronics

↳ Memory foam keeps the pillow soft and comfortable despite built-in technology

↳ Modular design allows users to adjust height for personal comfort

How are the Electronic Components protected?

Electronics (MCU, battery, speaker, LEDs, etc.) are securely embedded in foam compartments, sealed in waterproof silicone casings.

Entire pillow wrapped in TPU/PU-coated inner lining → blocks moisture without affecting sensor performance

Sensor zones are breathable and aligned for accurate signal detection.

Flat cables are moisture-insulated and routed safely to prevent short circuits.

BUSINESS IDEA

Hardware - Smart Pillow (Ezzie)

2 Bio-signal Sensors

Target	Sensor Technology	Placement	Working Principle
Brainwaves (EEG)	Dry EEG electrodes	Middle layer	Detects electrical signals from brain activity
Heart rate	PPG (Photoplethysmography)	Middle layer	Measures pulse via light absorption in blood vessels
Respiration rate	Piezo film or mmWave radar	Middle layer	Measures chest/throat expansion or breath reflection
Motion & Position sensors	IMU (accelerometer + gyroscope)	Middle layer	Detects micro-movements, turning, orientation
Temperature (body & ambient)	Thermistor or IR sensor	Middle layer	Reads temperature via contact or infrared radiation

BUSINESS IDEA

Hardware - Smart Pillow (Ezzie)

3 Sleep Enhancement Systems

Function	Technology	Placement	Working Principle	Key Notes
Sound output	Micro speaker	Bottom layer	Emits calming sounds, white noise, alarms	Use audio shielding or foam dampening to prevent echo
Light therapy	LED (soft RGB or amber)	Around pillow base rim	The brightness and color are tailored to each person's individual goals and the different stages of sleep	Avoid direct beam to eyes; diffused, indirect light preferred
Heating	Graphene film, resistive wire	Bottom layer	Generates mild heat via current flow	Add thermal limiters + temperature sensor for safety
Cooling	Peltier module/ PCM/ airflow	Bottom layer	Draws heat away or disperses it using active airflow	Requires good heat sinking for reverse side (hot zone)
Core controller	MCU + battery module	Bottom layer	Controls data collection, Bluetooth, real-time response	Use sleep mode & low-power logic to extend battery life

BUSINESS IDEA

Hardware - Smart Pillow (Ezzie)

4 Environmental Control Features

- Ezzie uses EEG data to dynamically adjust light, sound, and temperature based on sleep stages (N1, N2, N3, REM).
- The pillow tailors settings to each user's sleep goal (e.g., fall asleep faster, deeper rest).
- Personalized, real-time adjustment – no two pillows are alike.

5 Battery

- Battery type: Thin lithium-polymer – flexible, energy-dense, safe.
- Usage: Up to 10 days per charge, full recharge in 2 hours.
- Indicators: Battery percentage shown on pillow & app.
- Life: ~300–500 charge cycles (5-6 years with regular use).

6 Product Lifecycle

- Lifetime: ~6 years before sensor accuracy declines.
- Not cost-effective to repair → full replacement recommended after end of lifecycle.

BUSINESS IDEA

Software

1 Device & Account Integration

- Each smart pillow has a unique Product ID.
- When logging into the app, users must input this ID to pair their account with their pillow → ensures seamless two-way integration and personalization.

2 Multi-language Support

- Supports English, Vietnamese, French, and more.
- Designed for global users: whether you're jet-lagged in Tokyo or in London, the app speaks your language.

3 Personalized Sleep Goals

Users select sleep goals from a checklist based on their needs:

- Fall asleep more easily
- Reduce racing thoughts before sleep
- Ease into sleep after screen time
- Sleep more deeply
- Reduce nighttime awakenings
- Wake up feeling refreshed
- Feel more energized during the day
- Improve nap quality
- Recover from travel or jet lag
- Sleep better during pregnancy
- Other (custom input)

App sends data to pillow → pillow adjusts sound, light, temperature based on selected goal.

Users can set goals daily or fix a long-term goal.

BUSINESS IDEA

Software

AI Chatbot: “Ezzie”

Mascot Design & Personality

- Ezzie is shaped like a soft pillow → symbolizes comfort, sleep, and emotional safety.
- Gentle smile & round eyes → expresses emotions based on user’s mood (happy when user sleeps well, empathetic when not).
- Uses pastel colors (light blue, pink, lavender) → calming aesthetics, no eye strain.
- Acts as the face of Ezzie brand in marketing materials (Gen Z-friendly).

Personalized Q&A

- Responds to user questions based on sleep data collected from the smart pillow.
- Explains sleep quality, causes of poor sleep, and offers tailored suggestions.

Voice Interaction

- Activated by simply saying “Ezzie!” – no need to touch the phone.
- Perfect for the elderly or users unfamiliar with technology.
- Also convenient for young users who prefer hands-free interaction.

Voice Response with Personality Options

- Users can choose the chatbot’s voice (eg: youthful male or female, grandma tone, etc.)
- Increases emotional bonding and personalization.

BUSINESS IDEA

Software

5 Sleep Journal

- Tracks and analyzes 4 stages of sleep using pillow data (heart rate, brain waves, breath, motion).
- Calendar view with color codes:
 - Green = good
 - Yellow = okay
 - Orange = not great
 - Red = needs attention
- Tap on each day for detailed breakdown.
- Detects patterns and alerts if problems arise, with gentle tips (e.g., bedtime, diet, light exposure).

6

Feedback: “Tell Us About Your Nights”

- Pop-up every 2 weeks asking about recent sleep quality:
 1. 😴 Great
 2. 😊 Good
 3. 😐 Okay
 4. 😞 Poor
 5. 😫 Terrible
- Follow-up questions:
 - + **Good sleep:** “What made your sleep especially good?” (temperature, lighting, no waking, etc.)
 - + **Bad sleep:** “What affected your sleep?” (hot, anxious, noise, nightmares, etc.)
- Optional suggestion box.
- Based on feedback → app auto-adjusts pillow settings + sends supportive messages.

BUSINESS IDEA

Software

7 Forum

Purpose & Audience

1. Provide expert-backed sleep & wellness tips
2. Encourage product engagement & peer sharing
3. Users: Sleep-conscious consumers & health experts

Built-in Forum Features (via SDK)

1. Native integration for seamless UX
2. Includes: posting, commenting, liking, tagging, notifications, moderation
3. Goal: Centralized space for discussion & feedback

Engagement Activities

1. Polls, quizzes, AMAs with experts
2. Top Active Users of the Week
3. Gamification: badges & interaction rewards

Content Categories

1. Did You Know? – Fun facts & tips (eg: melatonin & blue light)
2. Good Sleep Habits – Practical, science-based routines
3. Product Guide – Pillow usage tips & updates
4. Your Story – User experiences, before or after
5. Feedback & Suggestions – User input & feature requests

Content Frequency

1. Posts: 3–6 per week (ideal: daily, if engagement is high)
2. Interactive threads: 1–2 per week

Smart Notifications

1. Gentle reminders at key moments (morning summary, bedtime wind-down, cleaning tips)
2. Friendly tone: “Hope you slept well!” Or “Let’s get ready for rest.”
3. Feedback prompts: “How’ve you been sleeping? Tap to share.”

BUSINESS IDEA

Software

Revenue Source

In-app Ads

- Non-intrusive, health- and sleep-focused ads.
- Examples: adjustable night lights, stress-reducing teas, aromatherapy candles.
- Displayed during moments like forum browsing – feel like helpful suggestions, not interruptions.

Freemium Revenue Model Summary

- Free for the first year after connecting the smart pillow.
- After that, users can continue using basic features for free, but must upgrade to Premium for advanced functions.

Free Features (Basic Tier):

- Personalized AI recommendations
- Daily sleep summaries (basic view)
- Standard sleep goal selection
- Community forum access
- Bi-weekly feedback prompts
- Basic sleep tips

Premium Features (paid after first year):

- Advanced sleep goals
- In-depth sleep analysis
- Emotionally responsive AI chatbot (voice & personality)
- Smart Sleep Journal with trends & health alerts
- Ad blocking

Premium Feature	After the first year (without payment)
Advanced sleep goals	Cannot customize or combine multiple goals
In-depth sleep analysis	Limited to daily summaries, no weekly/monthly trends or stage breakdowns
Emotionally responsive AI chatbot with voice + personality options	Locked - default voice only
Smart Sleep Journal with trend detection & health alerts	No alerts or notifications about irregular patterns
Ad blocking	Advertisements related to health and sleep products may occasionally appear

SDGs and USPs

eZZIE

SUSTAINABLE DEVELOPMENT GOALS

Good Health and Well-being	Ensure healthy lives and promote well-being
	Ezzie tackles sleep disorders by personalizing sleep, enhancing both mental and physical health through better rest, reduced stress, and improved focus.
	Enhance the capacity for early detection and risk mitigation concerning sleep quality issues.
Industry, Innovation, and Infrastructure	Ezzie is a technological innovation in the sleep-tech sector, integrating hardware (smart pillow), software (mobile app), and AI (chatbot + personalization).
	The use of bio-signal sensors, adaptive lighting/sound/temperature, and AI-based interaction reflects advanced R&D and smart product innovation.

UNIQUE SELLING POINTS

Highly Personalized Experience

Ezzie offers a level of personalization far beyond what most competitors provide. While many other sleep products stop at collecting data and generating simple reports or alerts, Ezzie goes further - from merely “tracking” to truly “understanding and responding.

With Ezzie, users can select their own sleep goals (e.g: falling asleep faster, reducing nighttime awakenings, or feeling refreshed in the morning). This allows Ezzie to tailor the environmental conditions: sound, light, temperature - to suit each individual’s needs on any given night.

Additionally, through the Sleep Journal, Ezzie continuously collects long-term sleep data, allowing the system to offer more accurate, personalized advice over time.

We proudly say: **No two Ezzie pillows are alike.** Each one adapts itself to the unique sleep profile of its user. Ezzie behaves like a personal sleep expert at home, using real-time bio-signals and your long-term patterns to optimize your sleep journey. And with the integrated AI chatbot - powered by your personal data - Ezzie can intelligently answer questions and provide insights that are tailored specifically to you.

UNIQUE SELLING POINTS

More than a Device - A True Companion

Ezzie is more than just a smart pillow – it's a gentle and caring companion by your side. From its friendly design and personalized chatbot to warm notifications, every detail is crafted to make you feel understood and supported. Ezzie's presence is always calm, empathetic, and ready to listen. When you experience sleep issues or anxiety, Ezzie responds with compassion based on your actual sleep data. This emotional layer of personalized care, encouragement, and safety is often missing from other sleep products. With Ezzie, users don't just sleep better – they feel comforted every night.

A product for the Vietnamese

Ezzie is not just a smart pillow – it is a product made specifically for Vietnamese people. While most sleep tech products on the market are too expensive and not tailored to local needs, Ezzie offers an effective solution at an affordable price. We believe that quality sleep should not be a privilege only for those who can afford it. Everyone deserves to be cared for, regardless of income. We aim not only to meet this unmet need but also to become the leading smart pillow brand in Vietnam.

PESTEL

ezzie

Political	Vietnam has yet to produce sensor-integrated smart pillows, and international options are limited and expensive. Under Decree 592/QD-TTg (2020), which supports national products, locally developing such pillows offers a strong opportunity to reach domestic consumers with better pricing, cultural relevance, and accessibility.
	Vietnam is strengthening its strategy for mental health and sleep care, especially in the post-COVID-19 period. This presents a valuable opportunity for the development of health-supporting products - and also a promising chance for the smart pillow.
Economic	Economic growth in Vietnam increases GDP and personal income, encouraging consumers to invest more in health and quality-of-life products.
	Rising spending on tech and health products shows growing consumer interest in innovative wellness solutions, creating a favorable market for smart pillows.
	Consumers are more price-sensitive and value-conscious, especially with high-tech products like smart pillows. This pressures businesses to ensure high quality, strong user experience, and clear communication of long-term health benefits to justify the premium price and gain trust.

Social

More and more Vietnamese people are experiencing sleep problems, and the quality of sleep is deteriorating for the majority. This creates a strong demand for smart solutions like smart pillows, which can improve sleep through personalized support and real-time monitoring.

Consumers are increasingly inclined to personalize their shopping experiences, a trend that many businesses are currently pursuing. Since our product focuses on personalized sleep support through app integration and adaptive features, it will likely resonate well with customers and build strong brand affinity. This personalization also increases user engagement and loyalty, as customers feel the product is tailored to their unique needs. Additionally, it opens up opportunities for data-driven service improvements and future upselling based on individual sleep patterns.

The wellness trend and home healthcare:

After the COVID-19 pandemic, the demand for home health support products has surged. A smart pillow can meet this need, especially for individuals with sleep issues and stress. In the future, the product can even penetrate markets that focus on wellness, such as the United States, Japan, and Europe.

Technological

The rapid development of sensor technology and IoT is making sensors for measuring heart rate, breathing rate, blood pressure and movement smaller, more accurate and energy efficient. This development presents a significant opportunity as it helps reduce production costs for products and enhances the user experience through the integration of the most advanced technologies.

The rapid pace of technological innovation leads to quick obsolescence. Without a strategy for regular updates to technology and software, products can quickly be replaced by newer competitors or more versatile wearable devices (such as smartwatches, smart rings, etc.).

The rapid growth of e-commerce presents a major opportunity for smart pillow manufacturers to reach a wide customer base at a low distribution cost. Moreover, this is also an opportunity to increase brand awareness and build customer trust.

Environmental	Energy-saving and emission regulations require smart products to be efficient and low in radiation, leading to higher after-sales costs for updates, maintenance, and eco-friendly disposal. These measures ensure safety and environmental protection but increase long-term expenses.
Legal	The Vietnamese government is orienting its development strategy toward digital transformation. This creates a great development opportunity because the product combines and digitizes data through its dedicated app. With strong encouragement from the government, the product will have an easier time accessing preferential policies such as tax incentives and technology transfer support. Additionally, creating and developing the app will be less challenging with the government's backing.
	The rapid pace of technological innovation leads to quick obsolescence. Without a strategy for regular updates to technology and software, products can quickly be replaced by newer competitors or more versatile wearable devices (such as smartwatches, smart rings, etc.).
	The rapid growth of e-commerce presents a major opportunity for smart pillow manufacturers to reach a wide customer base at a low distribution cost. Moreover, this is also an opportunity to increase brand awareness and build customer trust.

S FORCES

ezzie

Threat of new entrants

Medium - High

Building consumer trust in health-related technology takes time, especially when the product involves personal data and sleep quality. Additionally, intellectual property protections, such as patents for hardware-software integration or sleep algorithms, can create barriers for new players who are unable to legally replicate these innovations.

The sleep-tech market is growing rapidly, projected to increase from USD 41.70 billion in 2025 to USD 85.13 billion by 2034, attracting many startups. The presence of OEM manufacturers and white-label tech providers lowers technical and production barriers, making it easier for new players to enter the market.

Bargaining power of suppliers

Medium

Many components like grooved memory foam, biosensors, and MCUs are highly specialized and hard to replace, increasing supplier influence. Suitable suppliers are limited, especially for small-batch production and precise customization. The product also requires specialized materials such as breathable fabric covers, waterproof yet signal-friendly TPU/PU layers, and custom silicone casings, all of which must meet health-tech standards.

Standard parts like ESP32 modules, batteries, and LED strips are widely available. The main manufacturer, East West Manufacturing Vietnam, manages key processes in-house, reducing dependency on external suppliers. Most suppliers are Vietnam-based, which lowers logistics costs and improves quality control.

Bargaining power of buyers

High

Customers are highly price-sensitive, high quality and strong privacy protection. They also increasingly expect affordable pricing, high-quality user experience, visually appealing design, and strong data privacy. If these expectations are not met, they are likely to switch to cheaper or more trustworthy alternatives.

Brand loyalty tends to be limited for new or unfamiliar brands. Consumers often lack emotional attachment and are more likely to switch to alternatives that offer better pricing, superior features, or come from a more established and trusted brand.

Threat of substitutes

High

The market presents many substitute solutions that address sleep quality, such as:

- Wearable sleep trackers
- Mobile sleep apps
- White noise machines
- Smart mattresses
- Melatonin and sleep supplements

Users may combine cheaper solutions instead of buying one product.

Internal Competition

Low

Currently, there are few domestic competitors in Vietnam offering pillows with integrated AI apps. The market faces moderate competition from international brands like ZEEQ, Moona, and Smart Nora, but these products are poorly suited for Vietnamese consumers due to high prices, limited functions focusing on single issues, and low accessibility as they are not sold through local platforms or stores.

◆————◆

In the future, technology corporations such as Samsung and LG may expand into sleep-related devices if the market shows strong growth. Additionally, foreign businesses like ZEEQ Smart Pillow could enter the Vietnamese market once they recognize its potential.

VRIO

EZZIE

Resource	Integrated Mobile App
Value	A mobile app integrates with the smart pillow via Bluetooth to deliver a personalized sleep experience. Users set sleep goals, while the pillow adjusts temperature, lighting, and sound in real time. It tracks sleep patterns, sends data to the app, and offers tailored tips. Over time, the system learns user habits for more accurate recommendations.
Rarity	Few sleep products offer companion apps with deep real-time integration for light, temperature, and sound, goal-based sleep personalization, and an adaptive AI that evolves with user data. This level of hardware-software synergy and continuous learning is rare in the market.
Inimitability	This concept is new especially in conjunction with a pillow. However, an integrated mobile app is not difficult to replicate and improve upon, meaning that in the long run it is possible to imitate.
Organisation	The firm can execute the plan successfully by managing cross-platform development, ensuring reliable Bluetooth integration, handling data and privacy compliance, and maintaining a user-focused design with regular updates.

Resource	Companion Chatbot
Value	Meets rising demand for personalized wellness, leverages AI trends in health apps, fills gaps in sleep products by offering solutions and interaction, builds user connection, reduces reliance on experts, and boosts engagement and app usage.
Rarity	While AI chatbots are common, one designed specifically for sleep improvement that integrates real-time biofeedback, offers emotionally aware interactions, and provides adaptive, personalized recommendations is rare in the wellness market.
Inimitability	The chatbot provides advice based on real-time data collected through the pillow, eliminating the need for users to input background information manually. This allows users to rely entirely on the chatbot for personalized guidance without extra effort.
Organisation	With the right elements in place, including a skilled AI/ML team to develop a context-aware NLP engine, sleep science and behavioral psychology experts to guide chatbot logic, strong UX/UI designers for intuitive and emotionally resonant interaction, ethical data governance for privacy compliance, and a cross-functional strategy team to align the chatbot with both hardware and app experiences, the chatbot can be successfully developed and integrated.

Resource	Forum
Value	Tapping into the trend of peer-based wellness communities, this approach fosters user connection and shared experiences around sleep and health. It builds loyalty, reduces reliance on external platforms, offers peer support, and strengthens the app ecosystem. This leads to higher engagement, lower abandonment, more upsell opportunities, reduced support demand, and valuable user-generated content for insights or AI training.
Rarity	In-app forums are uncommon in wellness products, which typically rely on third-party communities. Few sleep solutions combine real-time sensor data, expert input, and peer support. By integrating social features with personalized tools like chatbots and sleep tracking, and ensuring expert moderation, the app creates a safe, engaging space for meaningful sleep and health conversations.
Inimitability	The concept of a forum being built around the pillow and the problem of sleeping and health in general is a breath of fresh air and is the first of its kind. Though, it is not difficult to imitate this in the long run.
Organisation	To achieve this, the platform needs a community management team for safety and engagement, technical support to build a scalable and responsive forum, active contributions from sleep experts for credibility, and a robust feedback system to inform app updates, chatbot refinement, and content creation.

Resource	All in One
Value	Eliminates needs for separate gadgets like noise machines, wearables, alarms Allow full control over all the factors related to sleep for maximum support Appeals to tech-savvy and health-conscious consumers seeking convenience and efficiency.
Rarity	Our pillow is the first one to integrate all possible fuctions and contain them within a single seamless ecosystem. Most of the competitors try to specialize in one or two functions only.
Inimitability	While not completely impossible to copy, the product is difficult to replicate effectively due to its hardware complexity, integrated software ecosystem with AI capabilities, and supply chain challenges. The high number of functions adds to the overall complexity, making it harder for other companies to keep up.
Organisation	If the company is structured to support research and development for comfort and technology synergy, continuous software updates and data science, scalable production and quality assurance to manage complexity, and marketing that highlights its premium, all-in-one positioning, it will be well-equipped for long-term success.

SWOT

ezzie

Strengths

1. Smart integration of the embedded technology and high personalization

The pillow is integrated with a mobile app that allows users to set personalized sleep goals based on collected data, thereby creating a customized sleep journey for each individual to achieve the most complete and optimized sleep experience. An AI chatbot is also provided to offer personalized advice on users' sleep-related issues, bringing convenience and ease of use for customers.

2. Emotional customer communication

With the support of an AI chatbot, customers can receive thoughtful advice anytime they need. Additionally, the app provides a community platform where users can easily interact, share experiences, and seek recommendations from experts. Notifications in a warm and helpful tone are also sent to customers.

3. Seamless integration between hardware and software for a comfortable experience

There is no need for bulky or complicated devices - the product is compact and convenient while still incorporating unique and advanced technological features, providing users with a smooth and comfortable experience.

4. Continuous updates of technology, content, and user experience

The company ensures that the user experience stays aligned with the latest trends and technological advancements. By fully leveraging modern technologies, the product consistently enhances user satisfaction and effectiveness.

Weaknesses

1. High production cost → High retail price

Advanced sensors, wireless components, and custom design drive up manufacturing cost. This may make it less accessible to price-sensitive customers, such as students or lower-income individuals.

2. Low barrier to imitation → Loss of long-term competitive advantage

Easily imitable idea of integrating personalized sleep plans and a wellness forum into a mobile app

3. Reliance on external suppliers → Supply chain risk

Key components such as sensors, fabric materials, or AI infrastructure are sourced from third parties, so the company may face delays, increased costs, or quality control issues when suppliers change terms or become unavailable.

Opportunities

1. Government support for national products (Decree 592/QD-TTg) creates favorable conditions for launching locally developed smart pillows, offering price and cultural advantages over imports.

2. Rising GDP and incomes in Vietnam increase purchasing power, leading to greater willingness to spend on health and wellness products.

3. More and more Vietnamese people are experiencing sleep problems, creating a strong demand for sleep improvement solutions.

4. Demands for products with personalized experience are on the rise. Since our product focuses on personalized sleep support through app integration and adaptive features, it will likely resonate well with customers and build strong brand affinity.

5. Growing global trend of people becoming more health - conscious, especially regarding sleep => The demand for home health support products has surged (especiall after COVID-19 pandemic).

6. Advances in sensors and IoT may lower future production costs.

7. The rise of e-commerce platforms offers a convenient way to reach a wider customer base.

Threats

1. Pressure on energy savings and emission reduction

=> Strict regulations must be followed during production
=> Costs will increase due to maintenance of energy-efficient hardware and environmentally friendly disposal of components such as batteries and sensors.

5. Data privacy risks and legal compliance pressure:

Since the app collects sensitive health data (heart rate, breathing, sleep patterns), the product must comply with Vietnamese data protection laws and global standards (e.g., GDPR).

2. The rapid pace of technological innovation leads to quick obsolescence.

Without regular updates, the product can quickly fall behind competitors, especially wearable devices from large tech firms.

6. Many substitute solutions that address sleep quality (wearable devices, mobile applications, Aromatherapy products,...) => Users may combine cheaper solutions instead of buying one product.

3. Intellectual property laws are becoming increasingly strict.

If the company violates intellectual property laws, it may face serious risks such as lawsuits, heavy fines, forced product recalls, and damage to brand reputation

7. New concept → User hesitation and trust issues

As the product is a relatively new and unfamiliar concept (AI chatbot + smart pillow), users may question its actual effectiveness or necessity. This could lead to hesitation in adoption and increase the need for educational marketing and credibility building.

4. Consumers are becoming increasingly discerning in their product choices and more sensitive to price.

Smart pillows are unlikely to be low-priced, which puts pressure on the business to focus on delivering superior product quality and user experience

8. High future competition from tech giants and foreign entrants if market potential increases.

CROSS SWOT

ezzie

Strength - Threat

S4 - T8 => To quickly respond to competition from large foreign tech companies. Being smaller in scale, the company has the advantage of greater flexibility and agility in adjusting products, updating new features, and promptly meeting market demands compared to large corporations that often have complex and slower processes. The company will establish a dedicated IT team to continuously monitor and perform regular software updates, and invite AI experts to evaluate and advise on integrating new personalization features. Meanwhile, the UX/UI development team will customize the interface and chatbot to suit the culture and language of various countries, creating distinctive cultural traits that help the product easily adapt when expanding to international markets.

S3 - T6 - T7 => **Leverage the seamless features of the product by boosting promotions and creating short-term trial experiences at stores or organizing workshops, presentations, and product demonstrations to attract and influence customers' purchasing decisions, instead of combining cheaper substitutes**

S4 - T5 => Integrate international data protection standards (e.g., the first sleep care solution in Vietnam that meets GDPR standards, establishing GDPR, ISO 27001) directly into the system design and continuously update privacy policies to ensure legal compliance and build user trust. Position the product as a strong, trustworthy brand image in the eyes of consumers.

Weakness - Threat

W1 - T4 => Offer bundled packages that include the smart pillow and free app features. This adds value for price-sensitive customers and helps position Ezzie as a long-term sleep health investment rather than a short-term fix.

W2 - T8 => Apply for patents on Ezzie's trademark and core functionalities (algorithm, memory foam (material) + capable of adjusting the pillow's height according to customers' preferences) Reinforce brand identity through emotional storytelling, a community forum, or a unique mascot to create brand depth that is hard for larger tech companies to copy.

W3 - T1 => Build a resilient and eco-compliant supply chain through strategic partnerships, dual sourcing, and sustainable hardware design to mitigate supplier risks and meet environmental regulations.

Strength - Opportunity

S1 - O1 => Leverage government incentive policies to develop and promote "Made in Vietnam" sleep care technology products. Launch campaigns that support Vietnamese people and seize opportunities to gain visibility through national advertisements or TV channels to enhance brand credibility.

S1 - O4 => Enhance personalization capabilities to meet the growing demand for products with unique experiences. Marketing should highlight the pillow's distinctive features - "a pillow made just for you." Launch campaigns that promote personalization.

S2 - O3 - O7 => Leverage the user community and forums to reach people whose friends are experiencing sleep problems. Invite experts and launch discussion forums on social media platforms to enhance credibility and drive rapid outreach. In addition, strengthen and expand the online buyer community through trusted individuals such as KOLs, KOCs, and family members.

S4 - O6 => Continuously update new technologies to reduce costs and enhance user experience quality, maintaining product appeal at a competitive price by partnering with technology providers to quickly integrate new sensors, thereby lowering selling prices while ensuring effectiveness.

Weakness - Opportunity

W2 - O4 => Upgrade the AI chatbot with advanced emotional intelligence and the ability to gather data collected via the pillow to improve user experience and personalization. As demand for tailored wellness solutions rises, this differentiation helps build brand loyalty and makes imitation harder.

W1 - O1 => Take advantage of government incentives under Decree 592/QD-TTg, which supports local tech products. Position Ezzie as a high-quality, made-in-Vietnam brand to reduce costs from imports and appeal to patriotic consumers.

W1 - O6 => Collaborate with Vietnamese IoT and sensor startups to co-develop affordable components. This reduces dependency on expensive imports and helps bring down production costs, enabling more competitive retail pricing.

COMPETITORS ANALYSIS

EZZIE

Name	Price	Feature	Pros and Cons
Smart Nora (America)	\$359 - \$449.99 (≈9.317.486 VND - 11.653.346 VND)	- Contact-Free Operation - AI-Powered Detection - Customizable Settings - Compatibility: Designed to work with any standard pillow, accommodating various sleeping positions. - Silent Operation - Portability - Smart Nora App	Pros: • FSA/HSA Eligible, • Smart and safe design • Adjust snoring and sleep Cons: • High price • Single function • No sleep tracking • No AI personalization • Mic sensitivity issues • Not ideal for side sleepers
ZEEQ SMART PILLOW (America)	\$199,99 (≈5.191.353 VND)	Sleep Analysis: Understand sleep quality through multiple data points Wireless Audio: Play music, nature sounds, audio books and popular apps Remote control: Quick access to control Snore Alarm: Gently vibrates so you adjust position without waking up Smart Alar: Adjusts wake-up time to best fit your sleep cycle Tencel Botanic Fibers: Natural fibers regulate temperature and wick away moisture	Pros: • Integrated with multi-functional technology and customizable firmness based on personal preference. • Detects snoring and gently vibrates to adjust your sleep position Cons: • Underestimated (Frequently disconnected in testing. Buggy app experience. Silent alarm offers ineffective vibration) • No localization for non-English markets so limited global distribution

Name	Price	Feature	Pros and Cons
Moona (France)	\$399 (≈10,355,646 VND)	- Active temperature regulation (18°C–35°C, water-based system). - Sleep tracking (accelerometer). - Smartphone app (personalized temperature schedules).	Pros: • Adjust snoring and sleep • Personalized temperature adjustment Cons: • High price • Limited distribution • Limited brand awareness • Narrow market targeting • Complicated design
Nitetronic (Germany)	\$549 (≈14,253,413 VND)	- Real-time snore detection (MEMS sensors/microphones). - Automatic head adjustment (air chambers). - Sleep tracking app (Nitetronic app).	Pros: • Clinically proven to reduce snoring • Smart sensors detect snoring in real time • Automatic head position adjustment during sleep Cons: • High price • Not widely available in local markets (e.g., Vietnam) due to limited local distribution partnerships

Name	Price	Feature	Pros and Cons
Comfy Nami ergonomic foam pillow (Vietnam)	1.100.000 VND	Comfy Nami Pillow is made with premium Memory Foam Provides optimal support and comfort Reduces pressure on the neck, shoulders, and spine Open-cell structure enhances flexibility and relieves pressure points Slow-rebound feature allows the pillow to contour to the body shape Effectively relieves pain and offers a soft, soothing feel	Pros: • Premium memory foam for neck, shoulder, and spine support. • Open-cell structure and slow-rebound for comfort. • Targets pain relief, suitable for people with cervical issues. Cons: • Only provides basic posture adjustment. • High price compared to its feature set. • Ezzie Doesn't Have: Heavy focus on orthopedic/pain relief design (Comfy Nami focuses more on physical posture, while Ezzie focuses more on sleep quality and smart support).
TESLA Smart Pillow (Czech Republic)	2,788,694 VND	Sleep Monitoring: The pillow regularly tracks your sleep and collects data like sleep duration and quality. Carbon Fibre Heating: Built-in heating system adjustable up to 55°C. You can power it using a power bank or a standard phone charger. Built-in Speaker: Play music, podcasts, or white noise directly from the pillow for better sleep and relaxation. Comfort & Practicality: Despite the smart features, it feels just like a regular soft pillow—comfortable and cozy. All-in-One App (iOS & Android): Tesla Smart app to manage its features, including sleep monitoring, heating controls, and audio playback.	Pros: • Tracks sleep duration and quality. • Built-in heating system. • Integrated speakers for audio features. • Affordable compared to other smart pillows. • Comfortable design with plug-and-play setup. • Multilingual app (good accessibility). Cons: • Limited to basic heating (no cooling mentioned). • Fewer health tracking sensors (compared to Ezzie's multi-sensor system). • Ezzie Doesn't Have: TESLA's simple plug-and-play system (Ezzie may have a more complex setup due to its advanced functions).

Name	Price	Feature	Pros and Cons
Aeroflow iCool ergonomic cooling pillow (Japan)	1.086.000 VND	Cooling While Sleeping: Made with iCool fabric featuring a unique weave structure, this pillow maintains a cool sensation even after multiple washes. It not only helps dissipate heat quickly making it easier for users to fall asleep but also keeps the head and neck dry, avoiding stuffiness and sweat buildup throughout the night. Perfect Neck Support: The two-layer structure and specialized ergonomic design are tailored to match the natural bone structure of the head and neck. Memory foam quickly adapts to the user’s sleeping posture, while contour foam adjusts the curvature of the airway, promoting better blood circulation and providing gentle, supportive comfort for a restful sleep.	Pros: • Cooling technology for heat dissipation. • Good ergonomic design to support head and neck. • Memory foam adapts to sleeping posture. Cons: • Only basic adjustment for sleeping posture. • Focuses mainly on cooling, lacks advanced smart features. • Ezzie Doesn’t Have: Specific focus on long-term cooling material like iCool fabric that remains effective after many washes (Ezzie adjusts temperature but does not specify fabric-level cooling tech).
MIJIA Smart Pillow - XIAOMI (China)	1.085.549 VND	Piezoelectric sensor tracks heartbeat, breathing, movements, and snoring via AI algorithms. Monitors deep/light sleep, generates scores/reports, and offers improvement tips via the MI Home app. Bluetooth 5.2 connects to Xiaomi smart devices (e.g., auto-adjusts curtains, AC, lights). Ergonomic design with 12cm/10cm heights, curved to support neck and shoulders, relieving pressure.	Pros: • Affordable price. • Smart integration with Xiaomi’s home ecosystem (e.g., can control curtains, lights, AC). • Piezoelectric sensor for comprehensive vital tracking (heart rate, breathing, snoring). • Ergonomic design with adjustable heights. • Strong brand trust and wide distribution in China. Cons: • Limited mainly to the Chinese market. • Focused mostly on Xiaomi users. • Less emotional or companionship element. • Less flexibility in global smart device integration. • Ezzie Doesn’t Have: Deep smart home integration like Xiaomi’s ability to automatically control other smart devices (e.g., curtains, AC).

SUBSTITUTES ANALYSIS

ezzie

Product	Summary	Unique Strength	Missing Value (Compare to Ezzie)
Wearable sleep trackers	- Track total sleep time and sleep stages (REM, deep, light) - Monitor heart rate during sleep. Oura also tracks respiratory rate and body temperature - Provide bedtime and wake-up suggestions; Oura offers a sleep and readiness score - Sync with health apps (Apple Health, Oura app) - Include mindfulness and relaxation guidance before sleep - Automatically detect sleep and analyze sleep trends over time	- Highly accurate data - Able to track multiple sleep metrics - 24/7 tracking: Monitor activity, stress, and recovery outside of sleep - Syncs with health platforms, providing guidance and enabling interactions	- No environmental control (temperature, light, sound). - No empathetic AI chatbot or emotional support. - May feel uncomfortable to wear during sleep. - No bidirectional communication between device and personalized sleep goals
Mobile sleep apps	- Use phone sensors or sound analysis to track sleep patterns and estimate sleep stages - Offer smart alarms that wake users during light sleep phases (e.g., Sleep Cycle) - Provide guided meditations, sleep stories, soundscapes, and breathing exercises (Calm, Headspace) - Help build consistent bedtime routines through reminders and relaxation tools - Basic sleep tracking with visual trends and sleep quality insights over time	- Low cost and easily accessible on any smartphone - Rich content libraries for relaxation and mental wellness - Lightweight, no physical discomfort or setup required	- Limited tracking accuracy without sensors. - No hardware to adjust sleep environment. - No real personalization from night-to-night - Lack interactive, emotional support.

Product	Summary	Unique Strength	Missing Value (Compare to Ezzie)
White noise machines/ Smart speakers	- Play soothing sounds like white noise, fan noise, or nature sounds to promote sleep - Include sleep timers to automatically turn off after a set time - Some models offer night lights with customizable colors - Help mask disruptive background noise for better sleep quality	- Offering a variety of sounds - Simple and effective for masking noise and aiding relaxation - User-friendly, no need for phone or wearable	- No personalization based on real-time sleep data - No adaptive features (lighting and playing sounds by sleep stages) - Not comprehensive. Only supports sleep through sound
Smart mattresses	- Eight Sleep Pod 5 Core: Offers dual-zone cooling and heating, sleep and health tracking, and smart alarms (vibration, thermal, sound) - Tempur-Pedic Mattresses: Known for adaptive TEMPUR-Material™ providing pressure relief and motion isolation. Some models feature cooling technologies like TEMPUR-PureCool+ - Xiaomi 8H Mattress: + Uses AI and pressure sensors to automatically adjust firmness based on body position + Sleep tracking via the MIJIA app, built-in graphene heating, gentle rocking for sleep aid, and smart wake-up via subtle movement. + Supports voice control with XiaoAI and app integration	- Comprehensive sleep support and tracking - Personalized comfort via AI-based firmness adjustment - Smart alarms and gentle sleep aids (e.g. rocking, thermal cues) - App and voice control for seamless experience - Premium materials for pressure relief and motion isolation	- Limited Portability: Smart mattresses are large and not easily movable, making them less suitable for users who relocate frequently. - High Cost: Advanced features come at a premium price, which may not be justifiable for all users

Product	Summary	Unique Strength	Missing Value (Compare to Ezzie)
Melatonin and sleep supplements	- Help regulate the sleep-wake cycle by supplementing or boosting natural melatonin levels - Aim to reduce time to fall asleep, improve sleep quality, and support deeper, more restful sleep	- Widely available and affordable - Easy to use - Helps regulate circadian rhythm, especially useful for jet lag and shift work - Often combined with other natural calming ingredients for enhanced effect	- Provides temporary support and does not fully address behavioral or environmental factors affecting sleep - Risk of dependency on sleep supplements
Traditional comfort solutions	- Promote relaxation and calm through aromatherapy - Herbal teas support natural sleepiness - Sleep masks and earplugs block light and noise to improve sleep environment - Create a soothing bedtime ritual that supports mental unwinding	- Easy to use - Widely available and affordable - Natural & non-invasive, appeals to users seeking gentle, organic methods. - Improve ambiance through calming scents, warmth, and quiet. - Ritual-based relaxation: Encourage consistent bedtime habits that psychologically prepare the body for sleep.	- Each solution targets only specific sleep needs, lacking comprehensive support - No active sleep optimization: Cannot respond to changing needs (e.g., temperature regulation, sleep stages). - No tracking or insights into sleep quality or problems

BMC MODEL

ezzie

Customer Segment	
Primary target	- Age: 30 - 50 - Middle-aged adults who are health-conscious, experience sleep-related issues, and prefer convenient, user-friendly, and multifunctional tech products. - Seeking sleep solutions either for themselves or for their parents.
Secondary target	- Age: 23-29 - Health-conscious individuals who seek a balance between health and life, prefer tech products, and are budget-aware.
Channel	
Direct channels	- Direct sales via Ezzie website
Indirect channels	- E-commerce platforms: Shopee, Lazada, TikTok Shop, Tiki - Electronics and tech retail chains: Điện Máy Xanh, FPT Shop, Hoàng Hà Mobile, CellphoneS - Retail chains specializing in sleep and mattress products: Vua Nệm, Nệm Xanh - Websites of specialized retail partners

Value Proposition	
Personalized Sleep Optimization	Ezzie integrates a smart pillow and mobile app to help users achieve specific sleep goals through AI-driven, real-time adjustments.
Adaptive Sleep Environment	The smart pillow dynamically adjusts temperature, sound, and light based on the user's sleep stages and preferences for a more restful sleep.
High-Precision Sleep Tracking	Advanced sensors track vital indicators such as brain waves, heart rate, breathing, and movement - providing users with rich, science-backed sleep insights.
Interactive Mobile App	The app includes engaging tools like the sleep journal, sleep coaching chatbot, user forum, and wellness notifications - all designed to improve sleep habits while keeping the experience enjoyable.
Comforting Emotional Design	With a soft pillow mascot and a caring digital persona, Ezzie offers not just functionality but emotional reassurance - transforming a sleep device into a trusted bedtime companion.

Customer Relationship

Empathetic Brand Persona	The chatbot and pillow mascot reflect warmth, empathy, and human-like companionship, helping users feel emotionally supported and understood.
Personalized AI Engagement	Based on user data, Ezzie provides customized sleep tips, motivational messages, and interactive Q&A - all in a conversational, friendly tone.
Ongoing Feedback Loop	Users are encouraged to give feedback through bi-weekly sleep check-ins. Their input is used to fine-tune both product features and AI responses.
Community Support & Belonging	The app and its linked forum provide a space for peer connection, expert Q&A, gamified activities, and recognition (e.g., badges for top contributors), fostering loyalty and retention.
Consistent, Non-Intrusive Communication	Warm reminders and gentle nudges maintain engagement without overwhelming the user

Key Resources	
Hardware & Technology	- Sensors to sense things like heart rate, breath, detect snore - Materials that are not only comfortable but also conducive for the technology to work - Bluetooth/Wi-Fi Modules to sync between the pillow and the app - Battery & Power Management Systems
Software & Data Systems	- Mobile App (iOS/Android) - AI & Analytics Engine - Cloud Infrastructure - Firmware & OTA Update System
Human Capitals	- Hardware & Software R&D - Mobile Developers & UX Designers - Data Scientists & Sleep Experts - Marketing team - Customer Support & Community Managers
Intellectual Property	Patents and Trademarks
Strategic Partnerships	- Hardware/ Software Partners - Distribution
Strategic Partnerships	- Demographic data: Including age, gender, occupation, and geographic location - Sleep-related problems - Sleep and wellness needs - User feedback and behavioral insights: Direct feedback and in-app usage patterns that help us optimize product features and user experience.

Key Activities

Product Research & Development

- Design, integrate, and fine-tune sensors (heart rate, motion, environmental).
- Develop and optimize automated adjustment mechanisms (temperature, sound, vibration, scent)

App Development & Operations

- Build algorithms for sleep data analysis and personalized recommendations.
- Maintain and update features (sleep goals, dashboards, chatbot, forum).

Data Management & Analysis

- Collect, store, and secure user data.
- Analyze user behavior and trends to refine algorithms and improve user experience.

Marketing & Sales

- Execute digital marketing campaigns (social media, influencers).
- Manage distribution partnerships (retail partners, e-commerce platforms).

Community Management & Customer Support

- Moderate the forum, organize online/offline events, and optimize engagement.
- Provide live-chat support, collect and address user feedback.

Quality Assurance & Production

- Conduct hardware quality checks and software testing.
- Oversee supply chain management, production oversight, and logistics.

Key Partners

Hardware & OEM

- VinaFoam: Memory foam (3 layers), Pre-cut technical cavities in the third foam layer (bottom layer)
- East West Manufacturing Vietnam: Pillow cover, Waterproof layer, Waterproof casing for modules, Module-to-foam assembly, cover sewing, and full product packaging
- Seed Fusion OEM Service: EEG (brainwaves), PPG (heart rate, HRV), IMU / Pressure sensor, Temperature sensor (IR & contact), LED RGB strip, Micro speaker, MCU (controller), Battery BMS+USB-C charging, Charging cable, Battery Indicator Display, Heating / Cooling module, Power Button, Flat cables
- BoxME: Logistic, Full fulfillment package (warehousing, packaging, delivery)

Distribution

- Online marketplaces: Shopee, Lazada, TikTok Shop, Tiki
- Vua Nệm, Nệm Xanh
- Electronic & Tech retail chains: Điện Máy Xanh, FPT Shop, Hoàng Hà Mobile, CellphoneS

Software

- Advertising partners: Scented candles, Chillme Candle, Air Purifier (Karofi), Lamp (Led Xanh), Detox Tea (Mevina), Sleepwear (M2)
- Health experts: Mental Health Experts (MindCare Vietnam)

Cost Structure

Fixed Costs

- Salary for staff full time
- Software + App Development (App core, UI, chatbot front-end)
- Initial website setup fee
- App Infrastructure & Maintenance (Firebase, AI server, DevOps, security & maintenance)
- Licensing and Patents
- Branding & Marketing
- Depreciation
- App Store Fee (Apple Dev, Google Play)
- Office Rent

Variable Costs

- Electronic components (includes all minor hardware) & sensors cost per unit
- Memory foam (3 layers + technical grooves) cost per unit
- Pillowcase (cotton + waterproof TPU) cost per unit
- Waterproof silicone casing
- Processing & testing at East West
- Logistics (Boxme full service) per unit
- Customer support and Service (per unit)
- Salary for part time staff (Marketing, Check order,...)
- Brand inserts, QR code, leaflet (in box)

Revenue Stream

Selling the smart pillow

- One-time sale of the physical smart pillow.
- Pillow includes built-in sensors and basic free app access.

App-based revenue stream

All features of the Ezzie app will be unlocked and free for the first 1 years after the user connects their smart pillow with the app. After the 1-year free trial, users will retain access to essential features, but will need to upgrade to a Premium Plan to continue using advanced functionalities.

In-app advertising

- Display targeted, non-intrusive ads in the free version of the app.
- Focus on wellness, health, and sleep-related brands, ensuring ad relevance and user trust.
- Potential to partner with clinics, supplement brands, or lifestyle products for sponsored content.

SEED AUDIO
Seeed Fusion OEM Service

WHAT THEY DO

- **OEM supplier** for all electronic components and sensors
- Modules are **pre-assembled & tested** for accuracy and performance.

WHY WE CHOSE THEM

- Startup-friendly: accepts low MOQs
- Fast prototyping, rich documentation
- Global logistics, great support
- Provides nearly all essential components inside the pillow
- Enables reliable sensor accuracy and rapid product iteration

Seed Process Quality Control

Main Flow	Quality Control Point	ECN Process	Description
Supplier qualification	-Supplier plant audit -Supplier performance assessment -Supplier process regular audit -Supplier quality improvement request	Create ECN in system (PLM)	-Customer requirement change. -Design change by development -Material EOL -Process Optimization, etc.
Receiving inspection	-IQC sampling -Repeated defect improvement request	ECN assessment	-ECN assessment
Solder Paste Printing	-Visual inspection -Solder height management	ECN approval	-ECN approval in system
Component Placement(SMT)	-IPQC first article inspection and lot judgment	ECN released	BOM, drawing, test file will be changed to latest version according after ECN released in PLM/ERP.
Reflow	-Temperature measurement before production	ECN implementation	Team execute ECN in production according PLM system.
Functional Testing	-100% functional testing in production		
Visual Inspection	-100% visual inspection before FQC		
Final Quality Inspection	-Visual & Functional testing sampling by AQL-0.65, C=0,		

Open Hardware and Co-Create

Seed Fusion Service elevates your innovative ideas to products and solutions for various verticals. With the full range of **open-source modules** and **industry-grade devices**, expertise in **product design**, experience in **production**, and resources in **global community and marketing**.

Seed is your go-to partner from 0 to ∞. Co-create with Seed Fusion, you can leverage Seed's capabilities in **Prototype, Produce, and Promote**, ranging from custom design, manufacturing to selling, covering the full product lifecycle from idea to delivery and iteration!

PARTNER ANALYSIS

WHAT THEY DO

- Produces 3-layer memory foam with custom-cut grooves
- Supports variable density: soft – medium – hard

WHY WE CHOSE THEM

- Vietnamese supplier: cost-effective and local logistics
- Can prototype small batches
- Accepts technical custom orders
- Forms the structural base of the pillow
- Holds all embedded hardware securely

VINAFOAM
Foam Manufacturing

PARTNER ANALYSIS

WHAT THEY DO

- Receives foam + electronics to complete **embedding, sewing cover, waterproofing, and final packaging**
- Provides **silicone rubber molding**

EAST WEST MANUFACTURING Assembly and Final Packaging

WHY WE CHOSE THEM

- High-quality EMS with small batch flexibility
- Vietnam-based factory → short supply chain
- Compliant with international QA standards
- Handles all final stages of production
- Ensures waterproofing and premium packaging

PARTNER ANALYSIS

WHY WE CHOSE THEM

- Local fulfillment solution, scalable
- Integrated service:
warehousing → delivery
- Good tech integration with app + order systems
- Enables smooth customer experience
- Handles both B2C and D2C shipping

BOXME Warehousing & Fulfillment

WHAT THEY DO

- Stores, packs, and ships final product
- Offers real-time order tracking & reverse logistics
- Supports branded packaging

Fulfillment process

PROMOTION

EZZIE

HOW TWO TARGET AUDIENCES USE SOCIAL MEDIA

	Age 30 - 50	Age 23 - 29
Main social platforms	Facebook, Youtube	Facebook, Youtube, TikTok, Instagram
Main content	Entertainment, news, health and wellness, tech and gadgets, family-related content, or educational content,...	Entertainment, lifestyle (fashion, food, travel), influencers and celebrities, fitness and beauty tips, tech and gadgets, career advice
Intention to use	Connecting, with family, entertainment, staying updated with news	Entertainment, discovering new products, and sharing personal experiences
Influencers	Content creators, celebrities, health experts, wellness bloggers, fitness influencers, tech reviewers	Content creators, lifestyle bloggers, fashion influencers, food bloggers, celebrities, beauty KOLs, tech reviewers

SOCIAL MEDIA MARKETING

Platforms	Target Group	Purpose	Tactics
Facebook	O2 group targeted	To build brand awareness, generate interest, and drive engagement with the target audience by leveraging Facebook as a key communication channel through a mix of owned and paid media strategies	- Develop our own Facebook fanpage to introduce the product, share updates and promotional programs - Publish viral posts on reputable and reliable Facebook pages - Sponsored Facebook posts on KOL-owned channels - Launch ads campaign
YouTube	O2 group targeted	Leverage YouTube to build brand credibility and emotional connection through authentic storytelling and influencer endorsement	- Review and unboxing clip uploaded by macro influencer - Join a founder-led interview video to share brand story and values

SOCIAL MEDIA MARKETING

Platforms	Target Group	Purpose	Tactics
TikTok	Age 23 - 29	Generate initial brand awareness among consumers	Informative and review clips uploaded by mega and macro influencers
Instagram	Age 23 - 29	Raise awareness through strong algorithm-based personalized advertising	Run ads integrating the link of our website

INFLUENCER MARKETING

Impact

Macro Influencers
(500K - 1M followers)

Mega Influencers
(>1M followers)

Tech Influencers

They effectively reach digitally savvy audiences seeking product insights, offering relatable content like unboxing, hands-on reviews, and first impressions that simplify complex tech.

Lifestyle Influencers

They deliver authentic content storytelling that highlights personal experiences and everyday moments, fostering emotional connection and building trust with target customers.

E-COMMERCE TOUCHPOINTS

Platforms	Target	Tactics
E-commerce: Shopee, Lazada, Tiki, TikTok shop	O2 group targeted	Utilize promotional programs of e-commerce platforms (freeship, flash sales, vouchers,...)
Brand-owned website	O2 group targeted	- Eye-pleasing and simple to access - Interactive landing page - Online forum designed to foster word-of-mouth marketing and user engagement

OFFLINE MARKETING

Channels	Tactics
Pop-up booths in big malls	- Product display stand + real-time demo with app - On-site trial experience: try lying down with full features guided by trained promoters - Standees for brand identity - Gather authentic user feedback to enhance remarketing efforts
Electronic & Tech retail chains Retail chains specializing in sleep and mattress products	- In-store promoters explaining smart features - Standees for brand identity - Arrange product placement in key retail zones - Offer bundled sales packages in which Ezzie pillow will be paired with other things
Social campaign	- Provide target customers with a comprehensive and hands-on experience of Ezzie's full offerings - Gather authentic user feedback to enhance remarketing efforts - Encourage customer-generated content

PR & PRESS COVERAGE

Activity	Specific
Press Release	Submit product launch and introduction articles to reputable news outlets (VnExpress, CafeBiz.vn, VietnamPlus.vn, Dân Trí, Vietnamnet.vn, Tuoitre.vn)
Sharing Impressive Data	Send campaign story to press editors of VTV1 (e.g. Chuyển động 24h, 5 phút hôm nay)

PROMOTIONAL OFFERS

Offer Type	Target Audience	Details	Goal
Pre-order discount	Early adopters	10% off when customers pre-order before launching	Drive early sales and impulsive purchasing
Limited edition packaging	Trend-sensitive buyers	Exclusive launch edition box for first 50 orders. Custom-made mini gifts following Ezzie's theme (sleep masks, socks and pillowcase) will be placed inside blind boxes, each containing a message or wish for the user	Create hype, sense of exclusivity
Bundle sales	In-store retail customers	Partner with retail chains to offer bundle deals combining Ezzie with other products (e.g. air purifiers, mattresses)	Drive impulsive purchases and tap into partners' existing customer base
Referral program	Community builders	When a customer refers a new buyer, both receive a limited-edition Ezzie-themed pillowcase	Encourage word-of-mouth growth

INC PLAN

EZZIE
